

Achieve a Sustainable Continuous Improvement Culture using a Change Management Approach

Presenter: Maria Ryan, Managing Director

How come many companies have started their Lean journey, only to find that they are unable to sustain their initial gains? How can we create an environment where everyone automatically thinks and behaves continuous improvement every hour, every minute, every second? How can Continuous Improvement become the very DNA of the organisation?

The answer to these questions lies in our understanding of how each of us responds to change on a personal level.

We invite you to our interactive, practical presentation that guides you through the Change journey. First, we explore how you and your employees process change at a psychological level. We then present our Change Management framework which will maximise the probably of sustaining change. Using a pharmaceutical case study, this Change framework is demonstrated in action to lead a culture of Continuous Improvement; Daily Visual Management, Problem Solving and Standard Work.
